TLDR; Raised \$4.6M as cofounder & CTO of the startup. Built AI agent infra - led Machine learning, high-scale backend projects. Built Products with a focus on UX.

TECHNICAL EXPERIENCE

Tanagram – Co-founder & CTO of Seed-Stage Startup

Feb 2025 — Current
San Francisco, CA (Remote)

GuardRails for AI agents

- Raised \$4.6M from Decibel Partners & PearVC
- Led a team of 5 engineers across ML, Data Pipelines, Backend, and AI-native use-cases.
- Led, both, the eng & product roadmap, use-cases like static analysis of codebases & building knowledge-graphs.
- Sales & client-success of principal-engineers at leading GenAI model-development companies like RunwayML
- Built 0 to 1, scaled AI-agent infrastructure on AWS, used workflow orchestration by inngest.
- Built AI eval-dataset, benchmarking, observability into LLM tool-call traces using Opik & Databricks.

Opendoor – Senior Product Engineer

July 2023 - Feb 2025
New York, NY (Remote)

The OpenExchange enterprise team - a B2B SaaS tool

- Saved \$610k in operator costs by single-handedly making browser-based AI agents for workflow automation.
- Led a user permissioning system (RBAC) with hierarchical controls, for data security & internal access management.
- Architected a highly available notification service (w/ AWS lambda CRON) for report generation for customers.
- Proactively resolved performance bottlenecks, including DB queries and front-end caching, resulting in faster load times and a smoother user experience.

Senior Software Engineer

Jun 2022 — Dec 2022

- Led a team of 2 engineers in developing a customer support tool, resulting in 32% increase in avg. customer wrap-up time.
- Defined the technical roadmap collaborating with the EM & staff-PM, and provided mentorship to junior team members.
- Implemented comprehensive monitoring using Datadog APM & Amplitude, focusing on optimizing p95 latency.
- Made a high-availability distributed microservice for cron-scheduling using rCron for time-based operations.
- Established a culture of accountability by introducing task estimation, & defining key metrics to track product progress.

Expedia – Backend Developer

Feb 2020 — Aug 2021
Seattle, WA (Remote)

Audio Streaming Team

- Built event-driven microservices for streaming audio & voice-calls globally w/ 180 TPS traffic. Built for high fault tolerance.
- Scaled Kafka producers using AWS Cloudwatch; saving costs by up to 35%-45%.
- Mitigated the concurrency issues w/ optimistic locking when 2+ agents joined the call
- Developed dozens of features - like voice transcription, removal of PII/PCI data - added observability, & reduced memory load on EC2's w/ pre-signed AWS S3 URLs

Goodera (Series B) – Software Developer

Jun 2017 — Feb 2020
Bangalore, India

An enterprise SaaS tool

- Refactored data pipeline (backend w/ web-sockets). Decreased CPU usage by 3-4x w/ the help of Nginx & helped save costs.
- Contributed to a notification service with RabbitMQ & NodeJS & used Amazon Redshift (with td-agent) for observability.
- **Tech Stack:** Python / Flask, NodeJS, MongoDB, SQL, RabbitMQ.

EDUCATION

Cornell University, (Merit Scholarship Recipient) Masters in Computer Science, 3.8 GPA

2022

VIT University, (National Scholarship Recipient) Bachelors in Computer Science, 3.85 GPA

2017

ACHIEVEMENTS

Recent side project [\[link\]](#) with 30 users & \$80k processed.

2023

Verda.ai: My own blockchain startup for battling fake video and images

2021

1st Prize in **Expedia Global Hackathon** for an NLP travel planning bot. Among 160 participants.

2021

Open-source contributor to the GraphQL-Flask Authentication library [\[link\]](#)

Member of Google Developers Group

2017
